D1 DE-A-199 54 755

2. Novelty (PCT Article 33(2))

D1 discloses a method and an arrangement for producing dimensionally accurate metal foam, in which moulded parts are heated and foamed in a chamber. The wall is made, in particular, from a quartz glass base and thus has a coefficient of expansion in the order of graphite and yttrium The chamber is also constructed such that the inner geometry of the chamber can easily be adapted to the final geometry of the item to be foamed (see column 2, lines 14 to 18). chamber in which the metal is foamed therefore cannot be distinguished from a mould. finished metal product is thus foamed in a dimensionally accurate manner. The semi-finished product is heated in the chamber using radiation energy from outside, which is made possible by a wall that is made of quartz glass material and is

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement permeable to radiation energy. A thermal radiator can always be controlled. Quartz glass is known to have a very small coefficient of expansion. The method and the device as per claims 1 and 12 $\,$

thus lack novelty.

The subject matter of the claims is industrially applicable.
